TITLE	County Data Book 1996: Kentucky Kids Count.
INSTITUTION	Kentucky Kids Count Consortium.; Kentucky Youth Advocates, Inc., Louisville.; Louisville Univ., KY. Urban Studies Inst.
SPONS AGENCY	Annie E. Casey Foundation, Baltimore, MD.
PUB DATE	Dec 96
NOTE	317p.; For the 1995 edition, see ED 403 993.
AVAILABLE FROM	Kentucky Youth Advocates, Inc., 2034 Frankfort Avenue, Louisville, KY 40206; phone: 502-895-8167 ($15).
PUB TYPE	Numerical/Quantitative Data (110) -- Reports - Descriptive (141)
EDRS PRICE	EDRS Price MF01 Plus Postage. PC Not Available from EDRS.
DESCRIPTORS	Academic Achievement; *Adolescents; Births to Single Women; Child Abuse; Child Neglect; *Children; *Counties; Dropout Rate; Elementary Secondary Education; Enrollment; Family Income; Family (Sociological Unit); Infants; Mortality Rate; Parent Background; Population Trends; Poverty; School District Spending; School Districts; School Effectiveness; *Social Indicators; Tables (Data); Trend Analysis; Violence; *Well Being
IDENTIFIERS	Aid to Families with Dependent Children; Food Stamp Program; *Indicators; *Kentucky; Medicaid; Supplemental Security Income Program

ABSTRACT

This Kids Count data book examines trends in the well-being of Kentucky children on a state-wide, county, and school district basis. An introductory essay finds a strong link between the percentage of adults completing high school in a given school district and various indicators: As the percentage of adults completing high school increases, the average household income increases and the poverty rate and high school dropout rate decrease in that district. The data book groups statewide and county data into four categories: (1) demographics (by age and race); (2) birth trends (crude and teen birth rates, infant mortality rate, births to unmarried women, age and, if over 25, education of women giving birth); (3) number of children in four Federal antipoverty programs; and (4) incidence of physical and sexual child abuse and child neglect. The book also groups statewide and school district data into four other categories: (1) community data (makeup of households, average household income, poverty rate by age, and education of householder); (2) school trends (enrollment, per pupil spending, and subsidized lunches); (3) property tax rates and revenue sources; and (4) school performance indicators (Kentucky Instructional Results Information System (KIRIS) performance, ACT scores, Commonwealth diplomas, and retention rate, dropout rate, transition rate, and attendance rate). A glossary presents definitions, methodology, and data sources. (EAJ)

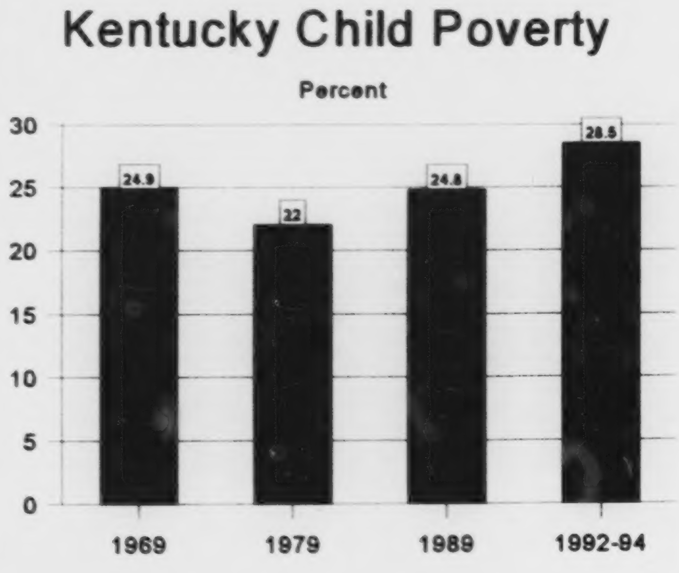
EDUCATION: The Key to Positive Futures for Kentucky's Families and Children

Child and family well-being are directly and decisively tied to the adult educational attainment of parents. The level of education of people around children -- in their families, and more generally, in their communities -- helps to set the odds for children's futures. Poverty rates, household income levels, quality of jobs in the community, rates of child abuse and neglect, and dropout rates are all affected by education levels of parents and other adults in the community. The overall well-being of children is based on family income and standard of living, place of residence, and several other factors that are also directly related to parental education.

Child Poverty

Child poverty is one of the best overall measures of children's well-being. The research is clear that poverty has direct harmful effects on children. The depth and the persistence of poverty in early childhood impacts children. Children who grow up at 100 percent of poverty do better than those who grow up at 50 percent. Children who live in deep poverty for one year do better than children who live in deep poverty for three years.

Child poverty has been a fact of life for too many of Kentucky's children for too long. After initial success in combating the child poverty rate in the 1960s and 1970s, the poverty rate in Kentucky declined slightly between 1969 and 1979, but has steadily risen ever since. In fact, recent analysis of state sample data for 1992-1994 suggests that nearly three in ten Kentucky children live in poverty. Another two in ten live just above the poverty line.



Sources: 1969,1979, 1989 figures from decennial Census data tabulated by Kentucky KIDS COUNT; 1992-1994 figures from Current Population March surveys tabulated by Center for Budget and Policy Priorities.

Adult Educational Status

In the data pages that make up the bulk of this report, we have examined the link between the educational status of adults within the school district and indicators of child well-being in that school district.

The two charts that follow show the relationship between the top and bottom ten school districts, ranked according to the percent of adults completing high school, and poverty, average household income, and school dropout rates. Looking strictly at the highest and the lowest percent of adults, ages 25 and over, who have completed high school, relationships can be seen for the poverty rate, average household income, and school dropout rate of children living in that district. The poverty rate in the bottom ten districts is nearly seven times higher, on average, than in the ten districts with the highest high school completion rates. The average household income in the districts with the highest high school completion rates is almost three times higher (on average) than in those with the lowest percentage of high school graduated adults. Dropout rates are also much higher in districts with a low percentage of adult high school graduates compared to those districts with high adult high school completion rates (about two and a half times higher).

Top 10 Kentucky School Districts

(Ranked according to percent of adults completing high school)

School District	Adults Completing High School (%)	Poverty Rate	Average Household Income	Dropout Rate
Anchorage Ind.	98.7	1.7	$112,500	no high school
Ft. Thomas Ind.	85.6	4.4	$41,609	2.44
Beechwood Ind.	84.7	1.4	$52,944	0.22
Oldham Co.	82.3	6.3	$47,262	1.85
Kenton Co.	79.9	5.4	$43,408	0.99
Franklin Co.	76.8	9.3	$34,937	1.85
Erlanger-Elsmere	76.5	6.8	$33,877	2.75
Boone Co.	76.0	6.9	$39,223	2.35
McCracken Co.	75.9	9.8	$34,647	1.40
Daviess Co.	75.2	10.1	$33,169	2.41

Bottom 10 Kentucky School Districts
(Ranked according to percent of adults completing high school)

School District	Adults Completing High School (%)	Poverty Rate	Average Household Income	Dropout Rate
Wolfe Co.	39.5	44.3	$15,906	2.40
Whitley Co.	39.5	39.9	$17,290	4.31
Elliot Co.	37.5	38.0	$18,877	4.12

Owsley Co.	33.4	52.1	$15,724	8.25
Jackson Co.	32.8	38.2	$19,362	3.41

Children in each of Kentucky's 120 counties live under unique conditions which influence how they and their families will experience and use education. Circumstances in Kentucky range from rural to urban, from poor to affluent, from poorly educated to highly educated; these various circumstances influence the type of education children receive. Regardless of the quality of education that is available, the best predictors of the education children will actually receive are their parents' educational attitudes and attainments. In order for children to attain higher levels and quality of education, parents must be involved with, and recognized as an important part of, their children's education.

Why is Education so Important?

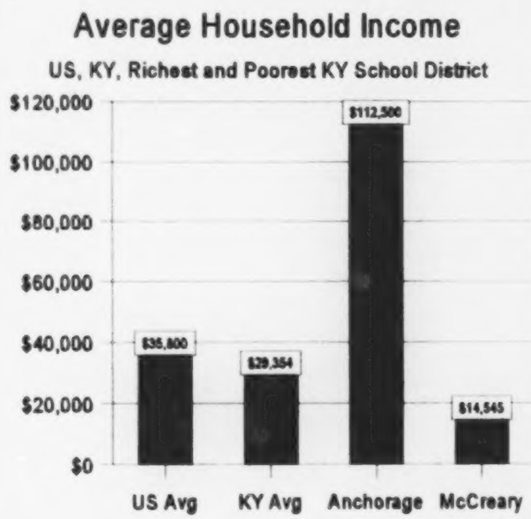
Parents' education level largely determines their family's economic well-being, as well as influencing educational and occupational aspirations for themselves and their children. Further, parents' educational attainment leads to particular levels of occupational and financial status. This, in turn, influences their children's health, nutrition, housing, clothing, and transportation. It also influences use of libraries and other educational resources, and exposure to cultural opportunities (e.g., museums, travel, availability of books and magazines, concerts, and theater). Parents' effective use of education also provides models for their children about how to set goals, make decisions, and solve problems. Children either reap the rewards or suffer the consequences of parental behaviors, resources, values, and choices concerning education, both in the short term and in their futures.

Education is important for both parents and their children because:

- Parental education is the strongest determinant of how far their children will go in school;
- Education strongly influences income and quality of life for parents and children;
- Higher parental education is associated with lower rates of child abuse and neglect;
- Parental values on education strongly influence children's decisions about education and career choice;
- Higher levels of education lead to lower poverty rates for adults and their children, for families, and for communities.

Childhood educational success is strongly correlated to the quality of jobs, income, and the lifestyle that children will have as adults. Success in school is strongly related to educational attainment which, in turn, is the best predictor of job opportunities that will be available when children become adults. Thus, quality of life for both parents and children is directly affected by the parents' education, and the quality of life for successive generations is directly affected by the education that our children receive.

Beyond material benefits of parental education, children raised by parents with more education are less likely to be abused, neglected, or to suffer from malnutrition. When parents value education and model the benefits of education, children will also value education and be more likely to work hard to succeed. Further, children of parents who effectively use their education are more likely to see themselves as masters of their own lives. There are many community level influences on children's well-being including parent and other adults (on average) level of education. As was shown in the first table in this essay, there is a strong relationship between adult high school completion rate (and post secondary education) and average household income. On average, Kentucky has a lower percentage of adults who complete high school than the nation as a whole. Even within Kentucky, the relationship holds between percent high school completion rate and average household income. For example, the Anchorage Independent School District has one of the highest levels of adult education and McCreary County School District has one of the lowest levels of adult education; these districts have the highest average household income ($112,500) and lowest ($14,545), respectively.



Source: School District Data Book, a special tabulation from the 1990 Census.

Well-educated adults and children are important to the well-being of society. Research has shown that low levels of education are related to economic and social problems such as teenage pregnancy, youth joblessness, school dropout, welfare dependancy, and decline in growth of work force production. Children who have not learned good academic skills are nine times more likely to drop out before finishing high school, eight times more likely to become parents outside of marriage, and four times more likely to become dependant on welfare. The counties with the highest unemployment and assistance payments have the lowest average education and literacy rates. Better educated adults are more productive, they construct and maintain safer communities for learning and living, get better schooling for their children, and produce better educated children who are most likely destined for similar advantaged lives. In short, better educated adults are more self-sufficient workers, citizens, and parents.

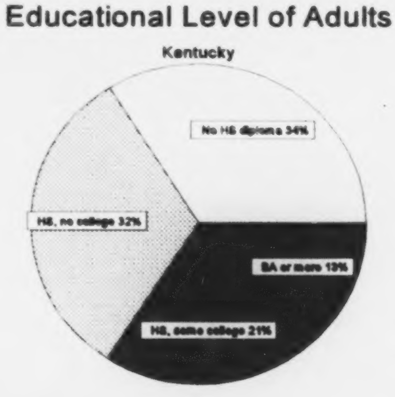
Welfare Reform

On the top of many policy maker's list of priorities today is welfare reform. Education, or the lack of education, is a primary factor in any program design. In Kentucky, we know that less that 40 percent of the adults participating in the old Aid to Families with Dependent Children (AFDC) program have a high school diploma. An additional 9 percent have some post secondary education, although not necessarily a two or four-year degree. While these percentages differ somewhat from region to region in Kentucky, the overall impact is clear. With less education and fewer skills, these adults, even with assistance in job training and placement, can expect to be employed in lower wage jobs and often without fringe benefits for themselves or their children.

In addition, we know that the labor market has changed dramatically for less skilled workers in the past decades. Nationally, high school dropouts have seen a 22 percent decline in their wages between 1979 and 1993. Those with high school diplomas have experienced a 12 percent decline in wages over the same period. Even for those who finished high school and went on to some post secondary education, wages have declined five percent. Those persons with four year college degrees have had wages jump 10 percent and for individuals with post graduate degrees, earnings have increased close to 20 percent. What is crystal clear today, more than ever before, is that education is absolutely necessary to get ahead in today's economy and labor market.

Family Involvement in Children's Education

Giving children high quality education requires highly trained teachers, high teacher-to-child ratio, small class size, developmentally appropriate curricula, sensitivity to individual and family differences, and family involvement. The level of parental educational attainment largely influences how a child will be parented, as well as the choices a child will make about education. If education is highly valued by the parents, it is more likely that the children will see it as a worthy goal.



Source: School District Data Book, a special tabulation from the 1990 Census.

Family literacy efforts aimed at both the parent and child generations are necessary to improve child education and child well-being in Kentucky. Family literacy refers to learning academic, as well as basic life skills (e.g., parenting skills, resource management, and job skills) across generations within the same family. Basic skills are those that help adults to be good parents, citizens, and workers, and allow them to function more effectively in daily life. Family literacy supports active parental engagement with their children's education and schools (e.g., parents actively supporting, encouraging questions, and giving feedback, praise, and guidance). This greatly enriches a child's experience with education. In this partnership, parents who support their children's education in an effective, patient, loving way enhance their children's excitement about discovering something new. Children will sense their parents' enthusiasm and respond positively by setting higher educational attainment goals as well as higher performance expectations.

Making KIDS COUNT in School: Moving Beyond Hand Wringing

In recognition that students' school performance is influenced by many factors beyond instruction and curriculum, school staff have begun to work with parents, students, and other community leaders to improve outcomes for children.

The Student Support Services of the Kentucky School Boards Association helps student support committees at the local level review data which describe the numbers of local youth who are experiencing such high risk outcomes as teen pregnancy, school dropout, abuse, neglect, and poverty. After an analysis of multi-year data from KIDS COUNT and other sources, the committees identify one outcome and several related risk factors which pose the greatest threat to children in their community.

In Taylor County, for instance, the committee decided that substance abuse was the greatest threat to their young people. It identified three risk factors it believed contributed to the problem:

- family management problems reflected in the growing number of substantiated cases of child abuse and neglect;
- family conflict reflected by domestic violence and divorce; and
- early and persistent discipline problems reflected by suspensions and time-outs at the elementary level.

The Taylor County Board of Education agreed to allocate $4500 for materials and training of three elementary teachers to facilitate support groups for students exhibiting persistent antisocial behavior and academic failure as well as those exposed to risk factors such as child abuse and neglect, divorce, or domestic violence. A new parent education program titled "Preparing for the Drug Free Years" will be offered by the local mental health agency to teach parents how to reduce elementary and middle school children's risk for substance abuse. A second offering will be the research based "Roots and Wings" which emphasizes early childhood.

We know that in Kentucky, there are major barriers to increasing parental involvement in children's education. One fact is that Kentucky's parents are likely to be less educated than those in other parts of the country. Rather than not valuing education, parents with low levels of education are more likely to be uncomfortable in schools dealing with more highly educated teachers and administrators, more likely to be unable to assist their children with school work as the content of the work gets more complex, and less likely to directly advocate for their child if a conflict arises.

Teacher and Community Responsibilities to Children

Each community has its own climate of educational influences on families and children. In some communities, education is highly valued as evidenced by local financial support for public schools. Some Kentucky communities have few resources but make major commitments to education. Indeed the mix of federal, state, and local contributions to local education varies from one district to the next. Others have a wealth of resources but commit relatively few of these to public schools, family literacy and adult education, and preschool programs.

Community climate can be seen in other ways too, such as support of reading campaigns, use and development of libraries, or public valuing of teachers, learners, and scholarship. Educators and community professionals can encourage parents and provide support and resources to model reading, problem solving, goal setting and other literacy endeavors, as well as encouraging parents to engage their children in learning at home. Many parents respond positively to such encouragement and are genuinely interested in helping their children achieve educational excellence.

Teachers' attitudes toward each child, and the students collectively, can have a profound effect. Understanding that home life influences children's school performance gives educators important new insight into classroom behavior and leads to more effective home/school collaborations for the benefit of all children. Though it can be extremely difficult given the varied backgrounds, experiences, and family life of each child, teachers are responsible for providing them the most encouraging, rewarding, and non-threatening environment possible.

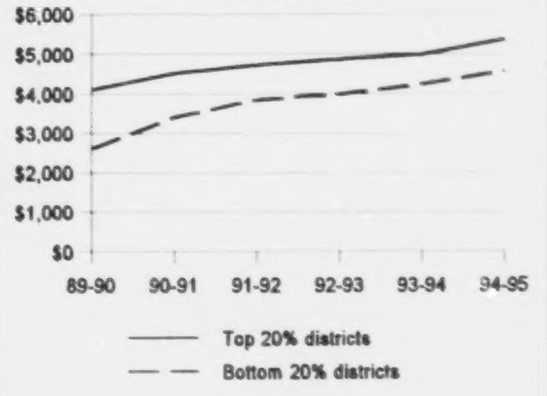
Pay Now or Pay Later

Inequities in educational funding led to the 1988 court ruling and subsequent passage of the Kentucky Education Reform Act in 1990, which has resulted in closing the spending gap between school districts. Unfortunately, just as buying a new computer does not make one an expert at using it, legislating education reform does not guarantee that all children will be well educated.

The gap between school district funding is closing as a result of the KERA legislation. However, this report identifies 31 school districts that did not levy sufficient local taxes to secure the full amount of matching state funds available under the SEEK funding formula adopted in the Kentucky Education Reform Act of 1990.

Kentucky Equity Gap

Per Pupil Spending



Source: Office of Educational Accountability Annual Report, 1996

For every year that Kentucky children living in poverty remain poor, the cost to tomorrow's workers increases by over a half a billion dollars. Poor children, on average, complete less school, and as a result, end up in jobs that tend to pay lower wages. This, by itself, will cost Kentuckians billions of dollars in lost wages over the period of only a few years (different figures range from over half a billion to almost three billion dollars per year). The cycle continues, however, in the children of the children who were raised in poverty, leading to generation after generation of lower income, less educated children and adults. These figures do not even take into account lost tax dollars from, and government support provided to, lower income families. The cost of children growing up in poverty with inadequate education is immense.

When people lack the education to secure a good job, they may consider other options they would not normally choose in order to survive and support their families. Some people will work long hours, or multiple jobs for low pay and no benefits, which does not allow adequate time for quality family life and educational involvement with children, such as helping with homework or talking about what their children did in school each day. Others may become dependent on the government or extended family to provide the basic needs of life. Still, others may turn to illegal activities out of desperation to support themselves and their families. In the end, the cost of educating and raising children to be productive, self-sufficient, contributing citizens, workers, and parents, is minute compared to the immense cost of repairing damages and trying to correct problems in older children and adults. We, as a society, can invest in prevention, such as high quality public education for all children, in maintenance, such as welfare programs, or in intervention once things go wrong, such as prisons. The investments and outcomes are our decision.

It can be safely assumed that parents want what they believe is best for their children. For too many Kentucky parents it is difficult to be a guide on a trail that they have not traveled. Even in a self interested vein, all adult citizens have a stake in child well-being and education, and should be committed to sculpting all of our children into productive, conscientious adults. We can significantly reduce future expenditures for welfare, prisons, juvenile correction, and other programs that focus on correcting problems after they have out stripped private resources. If more of the population were better educated there would be less unemployment, lower taxes, and less crime. An entire generation of better parents, workers, and citizens would be prepared to reach productively into our shared future and beyond.

Conclusion

People's experiences influence every part of their lives, and those of the people around them. Children who grow up in poor conditions are more likely to have poor outcomes. Many of them will not achieve the things of which they are capable, leading to increased personal and public burdens. Children cannot improve their own living conditions and financial situation. Able adults, including parents and other adults in the community, are responsible for seeing that all children have the care that concerned adults and communities can provide, and that our children are given the things that will allow them to become citizens who will be empowered to produce their own healthy, happy lives and who will be able and will choose to share their gifts with our communities. Responsible local decision making should include maximizing all available financial resources to provide adequate services and education for children.

Too often it is assumed that we can take short cuts to save money. When inadequate funding of public education and family literacy programs occurs we can count on having to pay much higher costs later for remediation and correction. We can pay now -- to provide better education, better living conditions, and better support for the families who, in turn, will better nurture our children -- or we can pay later. In the long run, it would be far more humane, more ethical, not to mention more cost effective, to raise children effectively rather than trying to correct later for poor family life, poor community investments, deferred investments, and inadequate education.

Given good quality living conditions and environment, children have unlimited potential. When communities, schools, and families collaborate around shared interests in the well-being of our families and children, those children and youth are far more likely to reach their full potential, becoming better citizens, workers, scholars, leaders, and parents.

Definitions, Methodology, and Data Sources

Multiple data sources are used for the 1996 Kentucky KIDS COUNT profiles of the status of children and their families in the state and its120 counties and the profiles of education related data in the 176 local school districts in the state.

Listed below, alphabetically, are the definitions, methodology, and data sources for the data elements in the 1996 profiles.

ACT Scores (94-95): The ACT (American College Test) is a nationally norm referenced test taken by college bound students, usually in their senior year of high school. The top composite score is 36. The national average for 1995 was 20.8 and Kentucky was 20.1. The percentage tested indicates the number of students tested divided by the number of graduates in a given year.

AFDC (Fiscal Year 95): The number of children served by the Aid For Families with Dependent Children (AFDC) program is the monthly average for the fiscal year 1995 (July 1994 through June 1995) taken from data in the PA-264 Report Series completed by the Department for Social Insurance, Cabinet for Families and Children. This program has been renamed Temporary Aid for Needy Families (TANF) in welfare reform legislation enacted by Congress and in Kentucky is called K-TAP, the Kentucky Temporary Assistance Program

Attendance Rate (94-95): The rate indicates the percentage of enrolled students in attendance in the classroom. Data were provided by the Kentucky Department of Education.

Average Annual Live Births: The average of the number of live births for the calendar years 1993, 1994, and 1995. Data were provided by the Division of Vital Statistics, Cabinet for Health Services, collected from birth certificates.

Average Household Income (1989): The reported 1989 incomes (collected by the 1990 Census) of all persons 15 and over in each household are summed and treated as a single amount. The average household income within each school district is provided for all households and then subdivided for households with and without children.

Birth Trends: See individual definitions.

Births with 1st Trimester Prenatal Care (%): The total number of women receiving prenatal care in the first trimester of pregnancy was divided by the total number of live births over the years 1993, 1994, and 1995 and converted to a percentage. Data were collected from birth certificates and provided by the Division of Vital Statistics, Cabinet for Health Services.

Births to Unmarried Women (%): The total number of births to unmarried women was divided by the total number of live births over the years 1993, 1994, and 1995 and converted to a percentage. Data were collected from birth certificates and provided by the Division of Vital Statistics, Cabinet for Health Services.

Child Abuse and Neglect: The child abuse and neglect data are taken from annual data compiled by the Department for Social Services, Cabinet for Families and Children. The incidences of physical abuse, sexual abuse, and dependency/neglect may count a child more than once and therefore over count the total number of children abused and neglected. A report is considered substantiated after state officials complete an investigation and determine that further action is justified to protect the child. Definitions of physical abuse, sexual abuse, and neglect are commonly understood. Dependency refers to a child who is under improper care in a situation that is not due to an intentional act of the parent or other person exercising custodial control of the child.

Child Poverty (1990): Poverty status for children was determined based on the 1989 federal poverty guidelines applied to family income reported during the 1990 Census. The poverty guideline for a family of four persons in 1989 was $12,674. The federal guideline is adjusted each year for inflation; for 1996, for a family of four, the poverty line in $15,600.

Commonwealth Diplomas: The Commonwealth Diploma is awarded to students who complete advanced placement courses which are above and beyond the regular requirements a high school diploma.

Community Information: Data under this header were derived from the School District Data Book, A Special Tabulation from the 1990 Census, and relate to all households (those with students in the schools and all other households as well) within the school district. See individual definitions for more information.

Crude Birth Rate: The crude birth rate is the total live births per 1,000 population. The crude birth rate statistic is calculated for the three-year period 1993-95. The graph compares the county crude birth rate to the state rate for the years 1980 through 1995. Data were collected from birth certificates and provided by the Division of Vital Statistics, Cabinet for Health Services.

Dependency/Neglect: See Child Abuse and Neglect definition.

Dropout Rate (94-95): Dropout rates measure the percentage of students enrolled in grades 7-12 who do not enroll the following year and have not graduated or transferred to another school. Districts without high schools will have a blank in the dropout rate. Data were provided by the Kentucky Department of Education.

Education of Householder (1990): This bar graph compares the education levels of the heads of all households within a given school district to the statewide percentages. The three categories are less than a high school graduate, high school graduate (shown as HS

Grad+), college graduate (shown as BA+). Information is self reported in the 1990 Census data, therefore head of household is also self defined and maybe either spouse within a married couple.

Education of Women (25+) Giving Birth (1993-1995): The education levels of women 25 years or older giving birth during calendar years 1993, 1994, and 1995. Younger women were excluded from these data since by definition they cannot have completed their education given their ages. Data were collected from birth certificates and provided by the Division of Vital Statistics, Cabinet for Health Services.

Enrollment: Enrollment figures for public and non public schools are compared for the 1989-90 and 1995-96 school years. The percent change is the difference between the recent and older enrollment divided by the 1989-90 figure, and therefore represents growth or decline over a six year period. Data were provided by the Kentucky Department of Education.

Fiscal Information (1994-95): See individual definitions.

Food Stamps: The numbers of children receiving food stamp benefits are for the month of October 1996. Data were provided by the Department for Social Insurance, Cabinet for Families and Children.

Free and Reduced Lunches (%): The percentages of children receiving free and reduced lunch are compared for the 1989-90 and 1995-96 school years. The percent change is the difference between the recent and older enrollment divided by the 1989-90 figure, and therefore represents growth or decline over a six year period. Data were provided by the Kentucky Department of Education.

Family Resource-Youth Services Centers: The number of funded family resource and youth service centers (FRYSCs), as of August 23, 1996, within each school district was provided by the Cabinet for Families and Children. Family resource centers serve elementary schools and youth service centers serve secondary (middle and high) schools. In some cases, a single center may serve multiple schools.

Households: The pie chart displays the composition of households within a school district as well as the total number of households within the district. Data are taken from the 1990 Census.

Infant Mortality Rate: The number of infant deaths (children less than one year old) in the three-year period, 1993, 1994, and 1995, was divided by the total number of live births in the same years and converted to thousands. The infant mortality rate reflects the number of infants who died per thousand births. Data were provided by the Division of Vital Statistics, Cabinet for Health Services, collected from birth and death certificates.

Levied Tax: The amount of local taxes imposed to support schools. Besides property taxes, local school districts may tax utilities, including cable TV. The local rate is expressed as cents per $100 of assessed property evaluation.

Live Births by Age of Mother: The pie chart displays the percentage of births in the years 1993, 1994, and 1995 according to the age of the mother. Data were collected from birth certificates and provided by the Division of Vital Statistics, Cabinet for Health Services.

KIRIS (Fall 1996): The status of all schools within the district on the Kentucky Instructional Results Information System (KIRIS) was released by the Kentucky Department of Education in October 1996. KIRIS was established by the Kentucky Education Reform Act of 1990 to hold schools accountable for student learning. Every two years, a school's score is calculated based on Kentucky-developed paper and pencil tests administered in grades 4, 8, and 11, writing profolios from grades 4, 8, and 12, and non-cognitive factors such as attendance, dropout rate, attendance rate. A baseline score is established over a two year period and the school's score over the next two years is compared to the baseline. The improvement goal for each school is a percentage improvement of the baseline score, with schools with lower baseline scores having to make more point gains than schools with higher baseline schools. Schools are monetarily rewarded based on improvement relative to their own baseline score. A *reward* school exceeded its improvement goal by 1 point or more. A *success* school reached its improvement goal or exceeded its goal by less than 1 point. An *improving* school's score was greater than the baseline but less than its improvement goal for the last two years or a school previously classified as improving or in decline that has not yet met its original improvement goal but would not be classified as in decline or crisis for the last two years. A *decline* school's score was less than 5 points below the baseline. A *crisis* school's score was 5 points or more below than the baseline.

Medicaid: The number of children receiving Medicaid financed health services was calculated by adding the monthly averages for the fiscal year 1995 (July 1994 - June 1995) of (1) children categorically eligible (on AFDC), (2) children medically eligible (based on age and family income), and (3) children receiving SSI in fiscal year 1995. The totals for categories (1) and (2) were taken from data compiled by the Department for Medicaid, Cabinet for Families and Children. The total for category (3) was received from the Social Security Administration.

Per Pupil Spending: Per pupil spending is calculated by dividing the total expenditures from all sources in a school district by the total student enrollment. Per pupil spending is compared for the 1989-90 and 1994-95 school years, adjusting the 1989-90 amount for inflation and expressing it in 1995 dollars. The percent change is the difference between the recent and older per pupil spending amount divided by the 1989-90 figure. With the adjustment for inflation, any growth or decline represents "real" changes in buying power over the five-year period. Data were provided by the Kentucky Department of Education.

Physical Abuse: See Child Abuse and Neglect definition.

Population (1990): For school districts, the 1990 census counts of all person, those under 6 years old, and those under 18 years old are shown.

Population (1996): Estimates of total, under 6, and under 18 populations were derived from the Urban Studies Institute, University of Louisville, population forecasts (1995 edition, high growth series).

Population % Below Poverty: Poverty rates, shown in percents for total, under 6, and under 18, were based on the number living below the federal poverty line in 1989 (as collected from 1990`Census).

Population Under 20: Based on midyear estimates from the Census Bureau, the population under 20 is divided into racial and ethnic categories for 1990 and 1994 and the percent of change is calculated. *Readers should note that Hispanic origin is an ethnic category and therefore is separate from the racial categories listed above it. Persons of Hispanic origin may be of any racial category.*

Poverty Programs: These four programs are the major programs for assisting children living in poor families. See individual definitions.

Property Tax Rates: See individual definitions.

Pupil/Teacher Ratio: This is calculated by dividing the average daily attendance by total classroom teachers. The data were provided by the Kentucky Department of Education, Division of Finance.

Retention Rate: Retention rates are the percentage of students in grades 4-12 who do not progress to the next grade level or graduate in a given year. (The primary years are not included in the retention measure.) The data were provided by the Kentucky Department of Education, Division of Finance.

Revenue by Source: The pie chart displays the percentage of total school revenue provided by local, state, and federal funding for the school year 1994-95. Total revenue for the year is also displayed. The data were provided by the Kentucky Department of Education, Division of Finance.

School Performance Indicators: See individual definitions.

School Trends: See individual definitions.

Schools with SBDM Councils: The number of School-Based Decision Making (SBDM) Councils, local decision making bodies composed of the school principal, two parents, and three teachers or certified staff within each district. In some cases, one building may have more than one council, each responsible for different grades or a council may exist for a school outside the traditional elementary, middle or high school designation. The data were provided by the Kentucky Department of Education and are current as of November 12, 1996.

Sexual Abuse: See Child Abuse and Neglect definition.

SSI: Supplemental Security Income (SSI) payments are provided to children with qualifying disabilities in low-income families. The numbers of children are monthly averages for December 1995 from data compiled by the U.S. Social Security Administration.

Teen Birth Rate: The teen birth rate is total number of births to females 17 and under divided by the total population of females 12 through 17 years old. The resulting rate reflects the number of births per 1,000 teens between and including the ages of 12 and 17. The teen birth rate statistic is calculated for the three year period 1993-95. The graph compares the county teen birth rate to the state rate for the years 1980 through 1995. Readers are cautioned that the teen birth rates reported in other sources are often for teens 12 through 19 and may not be comparable.

Tier I Maximum: The Tier I Maximum is the tax rate local school districts may impose without voter referendum. The rate is an additional 15 percent above the state guaranteed base and is equalized to 150 percent of the state's average per pupil assessment. If a district has not imposed taxes at or above the Tier I maximum it may be forgoing available state matching funds. If the Levied rate is below the Tier I Maximum the district received a *thumbs down*. If the Levied rate is at or above the Tier I Maximum the district received a *thumbs up*.

Transition Rate: Transition rates measure the percentage of graduates who are pursuing further education or are employed, either full or part time, six months after graduation. The data for the 1995 graduating class were provided by the Kentucky Department of Education

Vital Statistics (1993-1995): See individual definitions.

Other data about children's well-being which are not reported in the 1996 KIDS COUNT Data Book, especially county level data from the 1990 Census, may be available in earlier editions. Contact Kentucky Youth Advocates at 2034 Frankfort Avenue, Louisville, Kentucky 40206, or telephone (502) 895-8167.

THE KENTUCKY KIDS COUNT CONSORTIUM

Kentucky KIDS COUNT is a unique consortium of researchers and children's activists who have significant expertise in the aggregation, interpretation, and use of data to impact public policy. The Consortium's work includes producing a series of reports on children and families to publicize the needs of children, influence budget and programs decisions, and monitor state and local performance for children.

The Kentucky KIDS COUNT Consortium is part of the national KIDS COUNT project of the Annie E. Casey Foundation in Baltimore, Maryland. The Foundation publishes a national report each year and funds groups to publish data reports on the status of children in their states.

The Consortium includes individuals from three Kentucky universities and one statewide child advocacy organization. The members of the Consortium are:

Ronald Crouch
Director, Kentucky State Data Center,
Urban Studies Institute, University of Louisville

Lorraine Garkovich, Ph.D.
Professor, Department of Rural Sociology,
College of Agriculture, University of Kentucky

Gary Hansen, Ph.D.
Associate Professor, Department of Rural Sociology,
College of Agriculture, University of Kentucky

Debra Miller
Deputy Director, Kentucky Youth Advocates

Betty Olinger, Ph.D.
Assistant Vice President, Academic Affairs,
Kentucky State University

Michael Price, Ph.D.
State Demographer, Urban Studies Institute,
University of Louisville

David W. Richart
Executive Director, Kentucky Youth Advocates

Carol M. Straus
Senior Research Associate,
Center for Business and Economic Research, University of Kentucky

Stephan M. Wilson, Ph.D.
Associate Professor, Family Studies,
Research Center for Families and Children, University of Kentucky
